

# OCS Portamist Spray Odour Control System

## Cost Effective Odour Control Atomising System

### Ideal for:

- Emergency use to suit varying site conditions and operating needs
- Waste Water Treatment Facilities
- Landfill and Waste Disposal Sites
- Transfer Stations, Industry etc.

### HIRE FACILITIES AVAILABLE

Trailer mounted for complete transportability, the Portamist can be deployed as a comprehensive, independent odour control spray system around large sites or from site to site.

Mounted on a fully road worthy twin axle trailer, the Portamist is designed for easy movement across site to deliver odour control in a fully self contained unit.

The Portamist will comfortably control up to 5 spray heads on either a single multi head lance for local control, or separate lances spread across a wide area.

Of robust, weatherproofed construction, the Portamist exhibits the durability and reliability required to operate under the most arduous site conditions.

The Portamist can be operated as a totally independent spray control system with built in diesel powered pump and is the ideal choice for unmanned, outlying sites. In addition, the unit can be configured to supply up to 10 additional spray heads powered by an air xcompressor.

Quick and easy assembly of the spray lance system is facilitated via quick fit hose couplings and connectors, together with specially manufactured atomising nozzle and spray lance assemblies. The Portamist can be made fully operational by one man in less than 30 minutes.

A large reservoir of 1100 litres of odour control formulation allows the Portamist to operate unattended for long periods.
