

OCS SEPTA-PLUS™

Effective Biological Treatment for Septic Tank Systems

Benefits of OCS SEPTA-PLUS

- Control Odours
- Breaks Down Sludge in Septic Drainfields
- Restores Septic
- System Capacity
- Often Eliminates the need to Replace Drainfield
- Eliminates Wet Drainfields
- Non-Hazardous

AVOID EXPENSIVE REPLACEMENT

SEPTA-PLUS contains live bacteria especially developed to digest organic solids. **SEPTA-PLUS** is non-toxic, non-pathogenic, non-corrosive and USDA authorised.

SEPTA-PLUS contains the same strains of anaerobic and aerobic bacteria used by industrial wastewater treatment plants to digest grease and control hydrogen sulphide odour. Septic systems are made up of two parts; The tank and the drainfield. The drainfield is designed to allow the liquid to be absorbed into the soil. The tank separates the solids from the liquids. There are two kinds of solids; Organic and inorganic. Organics are normally digested by bacteria in the tank. Inorganics settle to the bottom of the tank, and must be occasionally pumped out.

Neglected septic systems can become overloaded allowing grease and sludge to flow into the drainfield and eventually clogging the septic system. Garbage disposers aggravate the problem.

Directions for use in standard domestic size tanks:

If you have SLOW or CLOGGED DRAINLINES; if the tank has not been pumped during the last year do so before using SEPTA-PLUS. The pour 5 litres directly into the tank if possible, otherwise pour into toilet and flush. After 30 days repeat with a second 5 litre treatment. For a severely clogged system a third or fourth treatment may be required.

SEPTA-PLUS can be used to treat larger capacity septic systems. Apply at the rate of 1 part SEPTA-PLUS to 2,000 parts sewage capacity of system.

SEPTA-PLUS is a biological process intended to work over a period of time. Normally there should be improvement within 30 days.

*SEPTA-PLUS™ IS A TRADEMARK OF SYNECO SYSTEMS INC. USA USED UNDER LICENCE.
